BIG GAME HUNTING STATISTICS FOR THE 2002/03 SEASON

104-07656/

INTRODUCTION

Big game hunting statistics have been compiled in British Columbia on an annual basis for many decades. In the days of the old B.C. Game Commission, records were kept in hand written ledgers. More recently, annual hunting survey results were published in book form from 1964 through 1975. In 1976, wildlife management switched from 28 game management areas to 7 regions which were further subdivided into over 200 management units. In 1980 parts of Regions 3 (Thompson Region) and 4 (Kootenay Region) were re-assigned to a new Region 8 (Okanagan Region). The regions have remained quite consistent since that time, with only a few management units being subdivided to make new management units and a few minor boundary changes. There are currently 225 management units. Recently, Region 7 has been subdivided into Region 7A (Omineca) and Region 7B (Peace), but this did not involve any management unit changes as existing management units were simply assigned to one region or the other.

Prior to 1976, hunting statistics were kept as paper documents only. Since and including 1976, all data has been stored and retained electronically. A menu driven computer system was developed to allow wildlife managers to access their data, and the practice of publishing statistics in book form was discontinued.

Despite easy computer access to hunting statistics, many wildlife managers have continued to express a desire to have their data available in book form. This would help them answer quick queries over the phone, take valuable data with them to meetings and so on. Additionally, many common questions posed by hunters can be answered by referring to this document. It is with these needs in mind that this publication has been produced. There are an infinite number of questions which can be addressed through analysis of the electronic data files which contain B.C.'s hunting statistics. This paper based volume can only answer a small subset of these questions, but it is useful in considering many of the more commonly asked ones.

The information contained within these pages presents data compiled at the provincial, regional and game management zone levels. The maps on pages 4 through 12 display the wildlife management regions, game management zones and management units used by the B.C. Fish and Wildlife Recreation and Allocation Branch. The game management zones are small groupings of management units based on geographical, ecological and access criteria. In many instances, the game management zones are similar to the former game management areas.

DATA SOURCES USED IN THIS PUBLICATION

Data from several sources was used to produce this volume. These sources are discussed below.

Compulsory Inspection Program:

Successful hunters of caribou, cougar, grizzly bear, mountain goat, and mountain sheep are required by law to report to the Wildlife Branch within 10 days of their kill. They complete a data form that captures a detailed account of their hunt and the data is stored in an electronic data base. This system provides a 100% count of the legal hunting harvest for these species. The harvest statistics presented in this publication for caribou, cougar, grizzly bear, mountain goat and mountain sheep were taken from the Compulsory Inspection Program.

Hunter Sample Survey:

Each year, a mailed questionnaire is sent to a random sample of hunters who purchased licences to hunt each big game species. The sampling intensity is high because statistics are needed for each management unit, and many of the management units are remote and lightly hunted. In order to contact enough hunters to assure useful returns, sample sizes must be large. Approximately 60,000 hunters are sent a questionnaire each year. A second questionnaire is sent to those who do not respond to the first mailing, and in the end, there is a 70% to 80% response. Follow up surveys to a random sample of non-respondents have revealed no significant response bias.

The survey contacts hunters who purchased licences for every major big game species except bison, which are hunted on a very limited and tightly control scale. Bison hunting statistics are gathered through the Liimited Entry Hunting Survey mentioned below. The sampling intensities for the 2002 survey, by species, are as follows:

SPECIES	NUMBER/PERCENT SAMPLED	NUMBER/PERCENT RESPONSE
Black Bear	6,218 / 48%	4,270 / 72%
Caribou	1,316 / 97%	904 / 71%
Cougar	706 / 93%	438 / 64%
Elk	10,834 / 92%	7,364 / 71%
Grizzly Bear	708 / 97%	473 / 69%
Moose	16,040 / 47%	11,634 / 75%
Mountain Goat	1,734 / 93%	1,260 / 74%
Mountain Sheep	1,784 / 96%	1,248 / 72%
Mule (black-tailed) Deer	*26,641 / 32%	18,638 / 74%
White-tailed Deer	12,035 / 43%	8,547 / 75%
Wolf	*16,749 / 20%	11,718 / 74%

* These species are sampled from sales of resident basic licences.

Hunters who purchased licences for Compulsory Inspection species are included in the Hunter Sample Survey because the Compulsory Inspection program only collects data from successful hunters. Accurate estimates of total numbers of hunters and total numbers of days spent hunting are necessary for sound wildlife management. The questionnaire collects this information, and it is added to the harvest information collected through the Compulsory Inspection program in order to provide a complete picture for Compulsory Inspection species.

The Compulsory Inspection program also allows a check on the accuracy of harvest estimates generated through the Hunter Sample Survey. A complete count of legal animals taken by hunters is provided by the Compulsory Inspection program for those species governed by Compulsory

Inspection. Since hunters for these same species are also sent a questionnaire, the Hunter Sample Survey also produces estimates of hunter kill. Comparison of these estimates with known values from Compulsory Inspection provides a measure of accuracy for Hunter Sample Survey estimates. Such comparisons are periodically undertaken, and show close agreement between known and estimated harvest figures.

All of the information in this publication related to the number of resident hunters and the number of resident hunter days was derived from the Hunter Sample Survey. Additionally, all estimates of resident harvest for black bear, elk, moose, mule (black-tailed) deer, white-tailed deer and wolf were produced from the Hunter Sample Survey.

Limited Entry Hunting Survey:

Questionnaires are sent to all hunters that drew Limited Entry Hunting Authorizations for bison, elk, moose, mule deer and white-tailed deer. These questionnaires are included as part of the Hunter Sample Survey mentioned above. The Limited Entry Hunting Survey provides detailed information on a hunt-by-hunt basis. The survey results are summarized at the regional level in the sections below for each of these species.

Guide-Outfitter System:

All Guide-Outfitters are legally required to complete a Guide-Outfitter Declaration form which provides a detailed account of the hunting activities of each of their clients. The data from these forms is stored in an electronic data base that contains all such data back to 1982. Since all non-resident hunters are legally compelled to have the services of a guide, this system is one of the main sources of non-resident hunting data. As with the Compulsory Inspection Program, this system provides a precise count of animals taken rather than an estimate, as is the case with the Hunter Sample Survey.

All of the information in this publication related to the number of non-resident hunters and the number of non-resident hunter days was taken from the Guide-Outfitter System. Additionally, all figures for non-resident harvest of black bear, caribou, elk, moose and wolf were taken from the Guide-Outfitter System.

WILDLIFE MANAGEMENT REGION 1 – VANCOUVER ISLAND REGION

*** NOTE *** Bison are available only in management units 7-42, 7-57 & 7-58, which are in the North East Rockies game management zone (see map on page 11). All resident bison hunting is by Limited Entry only. This area is subject to severe and variable weather conditions that have a considerable influence on hunting opportunity. In the 1998 season, 260 Limited Entry Hunting Authorizations were awarded to resident hunters. For the 1999 through 2002 seasons, only 120 Limited Entry Hunting Authorizations were awarded each year.

*** NOTE *** The confidence limits apply only to the resident totals. Non-resident totals are actual counts taken from Guide Outfitter reports. The values for West Kootenay, East Kootenay, Omineca Sub-Region and Peace Sub-Region were calculated separately, and may not precisely represent the sum of the values they include (although they will be very close). Because of the different calculations involved, confidence limits could not be produced.

Okanagan Region	165	772	148	65	16	12	13	1330	2521	2367	2675	10
Province	3332	3802	2046	769	1982	1005	1782	1936	16654	16257	17051	170

*** NOTE *** The values for West Kootenay, East Kootenay, Omineca Sub-Region and Peace Sub-Region were calculated separately, and may not precisely represent the sum of the values they include (although they will be very close). Because of the different calculations involved, confidence limits could not be produced.

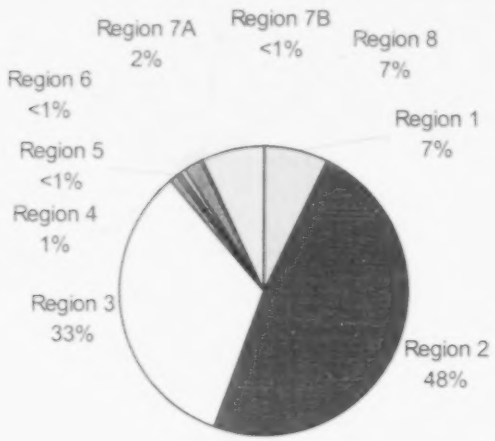
SUMMARY OF MULE DEER LIMITED ENTRY HUNTING BY REGION *** 2002 ***

REGION	TYPE OF ANIMAL	# OF PERMITS	# WHO APPLIED	AV. ODDS	PERCENT RESPONSE	EST. # HUNTERS	EST. # DAYS	EST. # KILLS	PERCENT SUCCESS	DAYS/ KILL
3	ANTLERLESS	1080	9651	8.9	80	725	2854	321	44	8.9
5	ANTLERLESS	965	6546	6.8	79	631	2647	372	59	7.1
6	ANTLERLESS	49	837	17.1	76	27	174	7	26	25.6
7	ANTLERLESS	1397	1981	1.4	70	612	1435	416	68	3.5
8	ANTLERLESS	365	6296	17.2	78	223	685	126	56	5.5

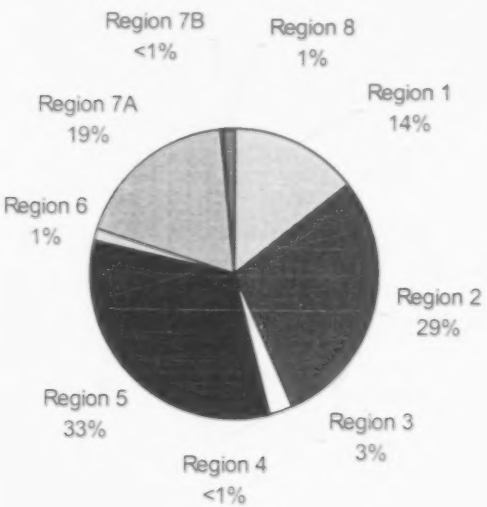
*** NOTE *** Percent response is the percentage of Limited Entry authorization holders who responded to the survey from which these estimates were derived. All hunters that drew a Limited Entry authorization were sent a questionnaire.

DISTRIBUTION OF MULE (BLACK-TAILED) DEER L.E.H. AUTHORIZATIONS
BY REGION OF RESIDENCE *** 2002 ***

Region 3 Mule Deer L.E.H. Authorization Holders According To Their Region of Residence - 2002

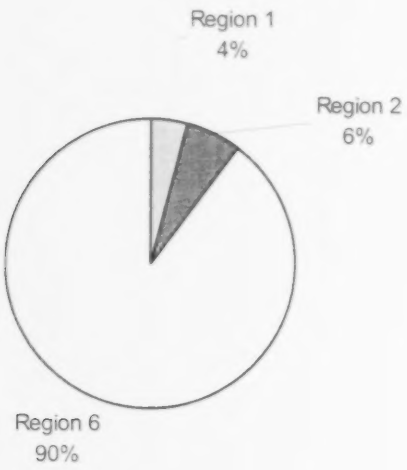


Region 5 Mule Deer L.E.H. Authorization Holders According To Their Region of Residence - 2002

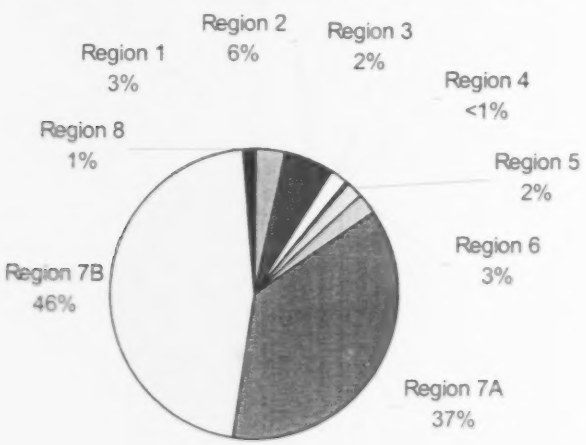


DISTRIBUTION OF MULE (BLACK-TAILED) DEER L.E.H. AUTHORIZATIONS
BY REGION OF RESIDENCE *** 2002 ***

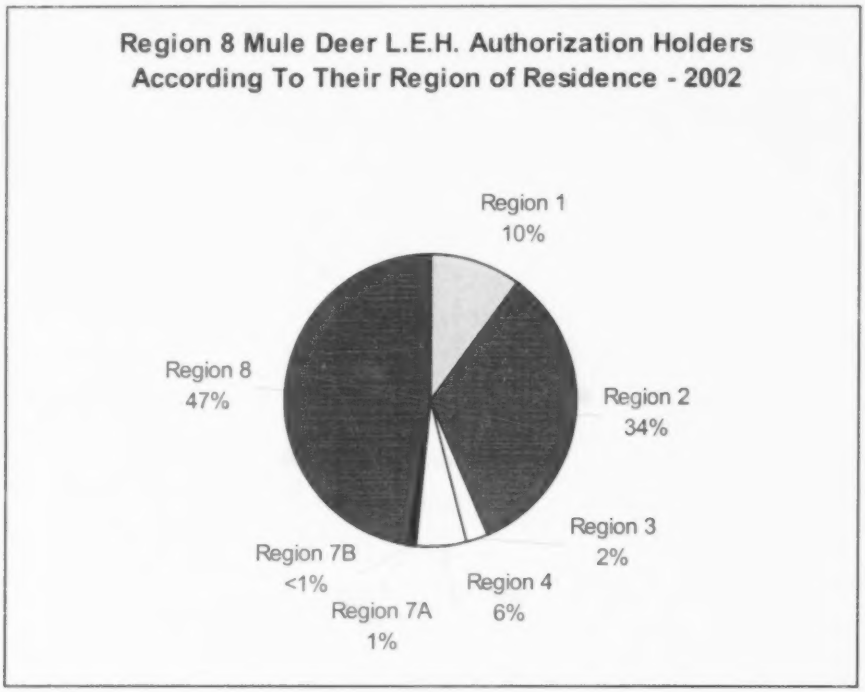
Region 6 Mule Deer L.E.H. Authorization Holders According To Their Region of Residence - 2002

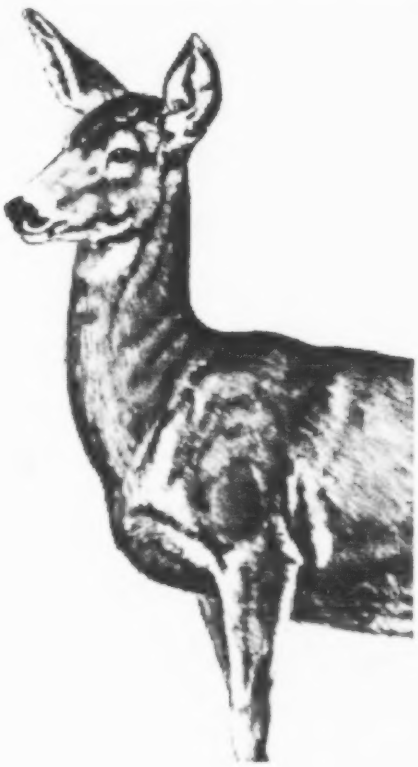


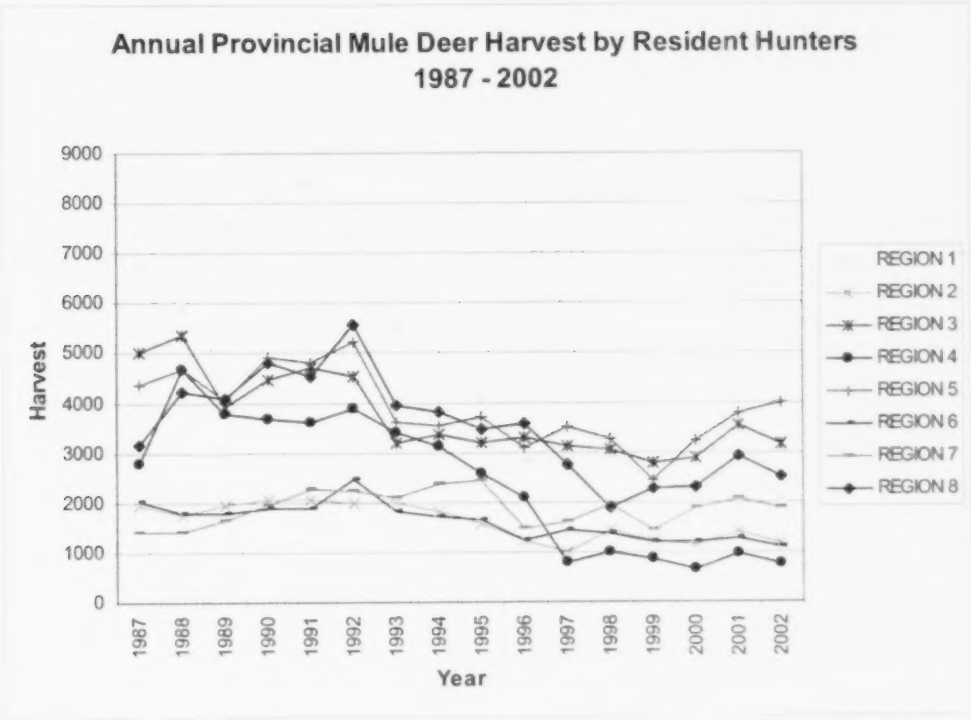
Region 7 Mule Deer L.E.H. Authorization Holders According To Their Region of Residence - 2002



DISTRIBUTION OF MULE (BLACK-TAILED) DEER L.E.H. AUTHORIZATIONS
BY REGION OF RESIDENCE *** 2002 ***







Until 2002, non-resident deer information was collected simply as 'DEER', and could not be broken down into mule deer or white-tailed deer. For this reason, non-resident data was not provided in graphical form.

*** NOTE *** The values for West Kootenay, East Kootenay, Omineca Sub-Region and Peace Sub-Region were calculated separately, and may not precisely represent the sum of the values they include (although they will be very close). Because of the different calculations involved, confidence limits could not be produced.

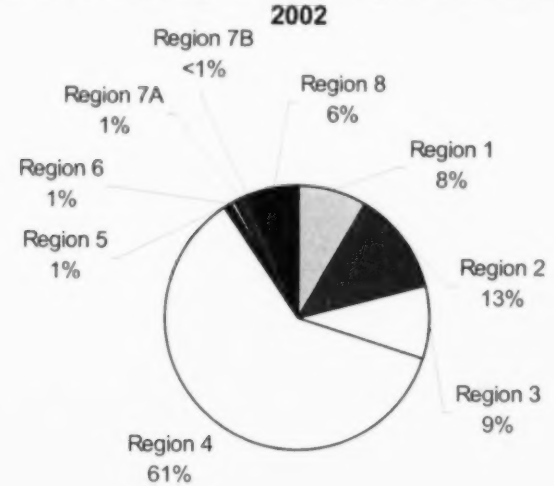
SUMMARY OF WHITE-TAILED DEER LIMITED ENTRY HUNTING BY REGION *** 2002 ***

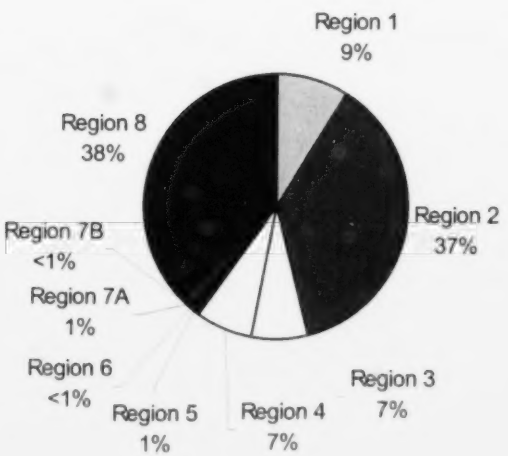
REGION	TYPE OF ANIMAL	# OF PERMITS	# WHO APPLIED	AV. ODDS	PERCENT RESPONSE	EST. # HUNTERS	EST. # DAYS	EST. # KILLS	PERCENT SUCCESS	DAYS/ KILL
4	ANTLERLESS/SPIKE BUCK	425	1462	3.4	63	219	941	49	23	19.0
8	ANTLERLESS	1865	10479	5.6	80	1221	5386	644	53	8.4

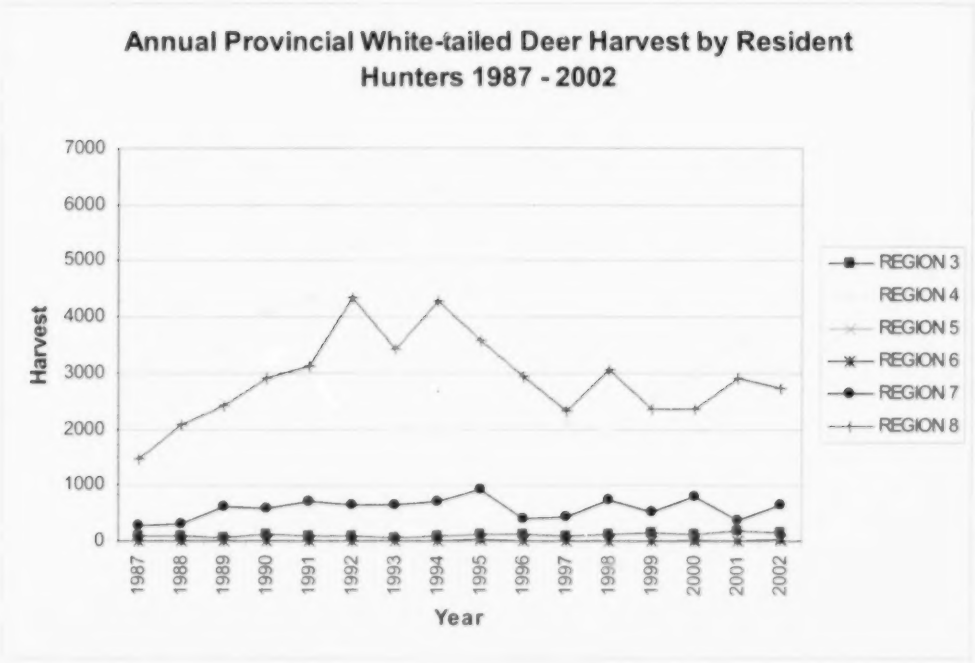
*** NOTE *** Percent response is the percentage of Limited Entry authorization holders who responded to the survey from which these estimates were derived. All hunters that drew a Limited Entry authorization were sent a questionnaire.

Region 4 White-tailed Deer L.E.H. Authorization Holders According To Their Region of Residence - 2002



Region 8 White-tailed Deer L.E.H. Authorization Holders According To Their Region of Residence - 2002





Until 2002, non-resident deer information was collected simply as 'DEER', and could not be broken down into mule deer or white-tailed deer. For this reason, non-resident data was not provided in graphical form.
